

Project Design Phase

Problem – Solution Fit Template

Date	02 July 2026
Team ID	
Project Name	India's Agricultural Crop Production Analysis
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem–Solution Fit analysis identifies the key challenges faced by farmers, policy analysts, and investors while working with agricultural data. It demonstrates how the Tableau dashboard addresses these challenges by providing interactive visualizations, filtering options, and historical trend analysis. The solution improves decision-making, enhances productivity, and supports effective agricultural planning through data-driven insights.

Purpose:

- To identify the major challenges faced by farmers, government policy analysts, and agribusiness investors.
- To understand the needs and expectations of different stakeholders in the agricultural sector.
- To analyze the root causes of problems in agricultural data analysis and decision-making.
- To validate that the proposed Tableau dashboard effectively addresses user problems.

Template:

Problem-Solution Fit Canvas			Purpose / Vision: To develop an interactive Tableau dashboard that helps farmers, government policy analysts, and investors analyze India's agricultural cultivation data and make data-driven decisions.	Version: 1.0
Define CS, fit into CL	1. CUSTOMER SEGMENT(S) CS - Small-Scale Farmers - Government Policy Analysts - Agribusiness Investors - Agricultural Researchers - Students & Data Analysts	6. CUSTOMER LIMITATIONS EG. BUDGET, DEVICES CL - Limited technical knowledge. - Lack of real-time visualization. - Difficulty interpreting large datasets. - Limited access to advanced analytics. - Time constraints.	5. AVAILABLE SOLUTIONS PROS & CONS AS Existing Solutions - Excel Reports - Government Agriculture Reports - Static Graphs - Manual Analysis Limitations - Not interactive - Difficult to analyze - Time-consuming - Limited comparison features	
	Focus on PR, tap into BE, understand RC	2. PROBLEMS / PAINS + ITS FREQUENCY PR - Difficulty identifying high-yield crops. (High) - Agricultural data is scattered across multiple sources. (High) - Time-consuming manual data analysis. (High) - Limited understanding of seasonal production trends. (Medium) - Difficult to compare state-wise crop performance. (High) - Lack of interactive visualization tools. (High)	9. PROBLEM ROOT / CAUSE RC - Agricultural data is fragmented. - Manual analysis takes significant time. - Historical trends are difficult to interpret. - Limited visualization tools. - Poor accessibility of agricultural insights.	7. BEHAVIOR + ITS INTENSITY BE - Search for agricultural production reports. - Compare crop performance. - Analyze historical production trends. - Review state-wise statistics. - Make farming, policy, or investment decisions.
Identify strong TR & EM		3. TRIGGERS TO ACT TR - Need to improve crop productivity. - Government requires policy planning. - Investors seek profitable opportunities. - Increasing demand for data-driven agriculture. - Requirement for historical trend analysis.	10. YOUR SOLUTION SL - Interactive Tableau Dashboard. - State-wise crop production analysis. - Seasonal trend visualization. - Crop-wise comparison charts. - KPI cards for quick insights. - Interactive filters (State, Crop, Season, Year). - Tableau Story for presenting key findings. - Exportable dashboards and reports. - Easy-to-use visual interface for decision-making.	
	4. EMOTIONS BEFORE / AFTER EM Before - Confused - Uncertain - Frustrated - Risk of poor decisions After - Confident - Well-informed - Satisfied - Better prepared for planning	8. CHANNELS of BEHAVIOR CH ONLINE - Tableau Dashboard - Government Agriculture Portals - Agricultural Websites - Research Publications OFFLINE - Agricultural Department Offices - Farming Workshops - Government Reports - Printed Agricultural Statistics
