

Project Planning Phase
Planning Logic

Date	02 JULY 2026
Team ID	
Project Name	India's Agricultural Crop Production Analysis
Maximum Marks	4 Marks

Planning Logic:

The planning logic focuses on systematically transforming raw agricultural data into meaningful visual insights. It involves data collection, preprocessing, dashboard development, testing, and deployment to help users analyze agricultural trends and make informed decisions.

KEY POINTS:

- Define the project objectives and identify the requirements of farmers, government policy analysts, and agribusiness investors.
- Collect India's agricultural cultivation dataset (1997–2021) from reliable data sources.
- Clean, preprocess, and validate the dataset to ensure data accuracy and consistency.
- Design an efficient data model and import the processed data into Tableau Desktop.
- Develop interactive worksheets, dashboards, maps, KPI cards, and Tableau Stories to visualize agricultural insights.
- Implement filters for **State, Crop, Season, and Year** to enable detailed analysis.
- Test the dashboards for correctness, usability, and performance.
- Publish the final dashboard and generate reports to support data-driven decision-making and agricultural planning.
