Brainstorm & Idea Prioritization Template

Date	01 July 2026
Team ID	
Project Name	India's Agricultural Crop Production Analysis
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

The brainstorming session focused on developing an interactive Tableau dashboard for analyzing India's agricultural cultivation data from 1997 to 2021. Team members suggested ideas related to crop production analysis, state-wise comparison, seasonal trends, dashboard design, data visualization, and interactive features. These ideas were carefully discussed, grouped into meaningful categories, and evaluated based on their importance and feasibility. These selected ideas formed the foundation for the dashboard development and ensured that the final solution effectively supports farmers, government agencies, and agribusiness investors in making informed decisions.

Step-1: Team Gathering, Collaboration and the Problem Statement

Template

India's Agricultural Cultivation Analysis Using Tableau

TEAM MEMBERS

- ANALYST : BANGARU VALLEPU
- DEVELOPER : ANURADHA DANABOINA
- PROJECT DESIGNER : SIVA NAGALAKSHMI BODDULA

GOAL

Develop an interactive Tableau dashboard to analyze India's agricultural cultivation data (1997–2021). Visualize crop production trends, seasonal patterns, and regional performance to support informed decision-making.

1

Problem statement :

How might we use Tableau dashboards to transform historical agricultural data into meaningful insights that help farmers, government agencies, and investors make informed decisions?

PROBLEM

Farmers struggle to identify suitable crops due to limited historical production insights.

PROBLEM

Government agencies need better visualization for policy planning and resource allocation.

PROBLEM

Investors require historical agricultural data to identify profitable investment opportunities.

PROBLEM

Large agricultural datasets are difficult to analyze without interactive dashboards.

Key rules of brainstorming
To run an smooth and productive session

 Stay in topic.

 Encourage wild ideas.

 Defer judgment.

 Listen to others.

 Go for volume.

 If possible, be visual.

Step-2: Brainstorm, Idea Listing and Grouping

After listing all the ideas, similar concepts were grouped into meaningful categories such as **Data Analysis, Dashboard Development, and Visualization**. This grouping process helped organize the ideas systematically and made it easier to evaluate and prioritize the most effective solutions for the project.

Step-3: Idea Prioritization

The brainstormed ideas were prioritized using an **Importance vs. Feasibility** approach. Ideas that offered the highest value and could be implemented effectively within the project scope were selected. This process helped the team focus on developing the most impactful features for the Tableau dashboard.
